Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The frame house is a two-story frame structure constructed in a rectangular plan. It is three-bays by one-bay and constructed on a high stone foundation. The main facade is symmetrically arranged with a central entrance and six-over-six windows in the other bays. The structure has a two-bay front porch. The exterior is covered in asphalt siding imitating brick and has a gable roof. The high stone foundation provides a full story in front of the house which has an entrance in the bottom of the porch. The house appears to date from the mid-19th century.

The property is located on the north side of Sandy Hook Road, approximately .08 mile east of Clark Road, in Sandy Hook. The house sits back from the road on a level site. An early 20th century concrete block garden wall with ball ornaments surrounding the front of the site. The main facade faces south.

The two-story structure is constructed of frame covered in asphalt imitation brick siding. The high fieldstone foundation is painted white. The foundation rises almost a full story on the main facade of the structure. This full-story is covered in front by the porch and has a single entrance in the bottom section of the porch. The porch is a two-bay structure with a hipped roof that covers the easternmost two bays of the main facade. A side stair up to the porch is in the westernmost bay. The porch is supported by square posts and the railing as well as the bottom sections supporting the porch are covered in asphalt imitation-brick siding. The main facade has a central entrance. Six-over-six windows are located in the outer bays of the first story and the three-bays of the second story. These windows are also located in the single bay of the first and second story of the gable ends. A four-pane window is in each gable. The structure has a boxed cornice and a gable roof covered in sheet metal. An interior-end brick chimney rises from the east gable end. On the western most side of the house is a fieldstone retaining wall adjoining the foundation of the house that forms a small ornamental garden.

8. Significance

Survey No. WA -III- 083

Period	Areas of Significance—Check and justify below			
<input type="checkbox"/> prehistoric	<input type="checkbox"/> archeology-prehistoric	<input type="checkbox"/> community planning	<input type="checkbox"/> landscape architecture	<input type="checkbox"/> religion
